

Computer-controlled, Direct-drive, High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine

The next-generation standard zigzag stitching machine LZ-2290A Series

A single LZ-2290A Series machine is extremely versatile and can perform many different stitching patterns.

It comes in two different models, one with standard specifications and the other with an anti-material slip capability. For both models, there are two subclass models, i.e., the "minute-quantity lubrication type" and the "dry-head type", which eliminates oil stains on sewing products. You may select the best-suited model from the diversified subclasses according to your applications.

The machine is also provided with a newly-developed operation panel, the IP-100. With this operation panel, you can easily establish settings for stitch shapes and stitches, as well as conduct setup changing, thereby achieving further increased availability.

The machine is provided with many different stitching patterns.

- ★ The machine is provided as standard with fourteen different basic zigzag stitching patterns grouped into eight different types. You can choose the zigzag stitching pattern you want directly on the operation panel (IP-100) of the machine body. The zigzag width, needle throw position and number of blind stitches can also be easily adjusted on the operation panel.
- * A single unit is extremely versatile and can perform straight stitching, standard zigzag stitching, 2-step zigzag stitching, 3-step zigzag stitching, scallop stitching, and blind stitching. As a result, the system is available for a far wider range of applications.

Sewing pattern

Name of	Straight	Standard			Scallop (left)			Scallop (right)				Blind	Custom		
pattern	stitch	zigzag				Standard	Crescent	Equal- width	Equal- width	Standard	Crescent	Equal- width	Equal- width		stitch (right)
Stitch pattern		\	$\wedge \wedge \vee$	$\wedge \wedge \wedge \vee$	HAMMAN	MAMMAN	MAMMAN	MAN	~~~~	MMMMA	MMMM	NMy	1 Juny	λ	
Number of stitches	1	2	4	6		24		12		24		12	2 +	+ a	Max. 500

Advanced operation panel **IP-100**

- *A liquid crystal display has been adopted. It displays stitch shapes, zigzag width and standard lines with pictographs and settings all together on one screen to improve operability of the panel.
- ★ The machine has added capabilities that make the most out of the computer-controlled sewing machine functions, such as program stitching (constant-dimension sewing), cycle sewing and continuous sewing. With these capabilities, the machine is able to respond to sewing in various processes.

SmartMedia card

★ Custom pattern data can be stored using the same SmartMedia that is widely used for digital cameras. This enables the sharing of custom patterns, not only in one plant, but also among two or more sewing plants, by exchanging data via e-mail systems.

Connection to personal computer

Example of screen displays —

Scallop stitch shape setting

Continuous stitching

Maintenance function

Communication settings

Custom patterns can be created on the operation panel with ease.

- * You can quickly create an original stitching pattern on the operation panel and then try to sew it on a trial basis.
 - A wider variation in design enables the machine to respond to wider applications, such as foundations, ladies' wear and men's wear.
- * The machine requires neither a programming device nor ROM writer.

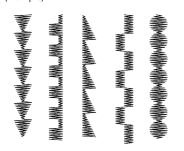

Setting the number of stitches

for a blind stitching pattern

Custom patterns

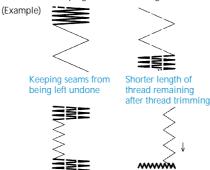

- Original sewing patterns can be quickly created and stored in memory.
- Max. 10 patterns, Max. 20 steps / pattern, and Max. 500 stitches / step

(Example)

Condense custom patterns *Automatic reverse feed function is required.

• The user can specify original condense custom patterns. This type of pattern is very effective at producing improved bartacks and keeping seams from being left undone.

Bartacks

• Start and end of sewing: A maximum of 20 different patterns, with a max. of 64 steps/pattern.

The machine, with its automatic thread trimmer, is able to leave shorter thread after thread trimming as compared with the conventional machines

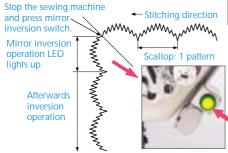

Abundant variation in stitching.

Mirroring of scallop stitches

- The machine produces beautifully finished scallop stitches on front part of a girdle. etc.
- · For the scallop stitch, the starting position for sewing can be selected between the top and bottom of a scallop.

(Example)

(Example)

· The left and right stopping positions of the

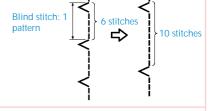

· The user can set the

number of stitches

(3 to 250 stitches.)

for a pattern.

 These settings are corner stitching for label attachment or decorative stitching on the fronts of girdles.

(Example)

Setting of the left and right stopping positions

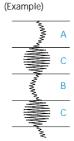

- needle can be controlled.
- effective when performing

Continuous stitching

- · Custom patterns can be joined.
- · Max. 10 patterns, Max. 20 steps / pattern, and Max. 500 stitches / step

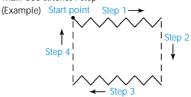

Pattern combining patterns A, C, B and C

Cycle sewing

Mirror inversion switch

- The machine is able to sew different patterns while changing them in sequence.
- Max. 10 patterns, Max. 20 steps / pattern, and Max. 500 stitches / step

Program stitching

 As many as 20 different constant-dimension stitch patterns can be programmed. The maximum number of stitches that can be set for one step is 500.

Multi-layer stitching

· It is used for reinforcing fastening stitches or bartacks

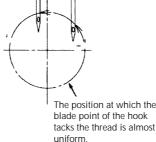

Soft-texture seam quality.

- * The thread tension mechanism, bobbin case and feed timing have been improved to produce soft-textured seams.
- * The machine is equipped with a hookdriving shaft-offset mechanism which places the hook-rotating shaft off-center from the center of zigzag stroke of the needle. This mechanism allows the blade point of the hook to catch the needle thread every time regardless of the needle throwing direction. As a result, the machine is immune to sewing troubles such as stitch skipping and thread breakage, annoyances likely to occur with the conventional machine, especially when the needle throws to the right.

■ Hook-driving shaft offset mechanism

Right

★ For the minute-quantity lubrication type hook, the inner hook is finished with titanium to keep it from becoming hot. The machine requires only a very small quantity of oil. This prevents oil stains on the material and the improves durability of the hook. In addition, the hook configuration is carefully designed to avoid needle breakage.

Newly developed larger-size machine head with a long arm.

Wider space under the arm

JUKI has developed a new high-long arm machine head one size larger than the head for the conventional lockstitch machine. With its wider area under the arm, the machine permits easy handling of the sewing material for improved operability. The shape of the jaw gives the operator a clear view of the area around the needle.

Reduced noise and vibration

The machine comes with a more rigid and well-balanced machine head frame. This, coupled with the direct-drive method, dramatically reduces the noise and vibration of the machine and helps reduce operator fatigue.

Excellent basic performance.

Higher productivity

★ In the standard zigzag stitching mode with the zigzag width set to 4mm, a frequently selected operating condition, the machine sews at a top speed of 5000rpm, that is the world's highest available speed as a computer-controlled zigzag stitching machine, to increase in productivity.

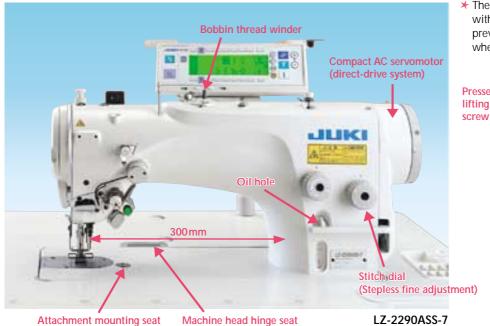

(The dry-head type and the anti-material-slip type machines are excluded.)

The maximum zigzag width: 10mm

★ A zigzag width of as large as 10mm is possible for standard zigzag, 2-step zigzag and 3-step zigzag stitches. Sewing troubles such as stitch skipping or thread breakage will never occur even when sewing at the maximum zigzag width. * A gauge that supports 10mm is required.

Increased feed amount

- ➤ Since the machine supports the feed amount as large as 5mm, this single machine is able to handle various feed types from standard feed to coarse feed. The coarse feed is effective when sewing stretched elastic tapes in processes such as elastic tape attachment to waistbands in shorts. (For the anti-material-slip type machine, the maximum feed amount is 2.5mm.)
- * The stitch dial is a stepless adjustable type. This enables fine adjustment of the feed amount.

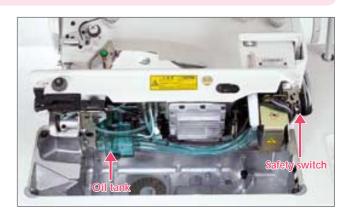

★ The machine is provided as standard with a micro-lifter screw. This helps prevent material slippage or damages when using elastic materials.

Presser lifting screw

linge seat LZ-2240A33-

Excellent maintainability.

- ★ The machine is structured without an oil pan. Oil is supplied from the oil tank installed on the machine to the hook and needle bar.
- ★ In addition, the oil hole is located on the machine arm. This is quite helpful to female operators; since oiling can be carried out without tilting the machine head.
- ★ Time and effort are conventionally required to remove the knee lifter and cover. This means the machine head can be easily tilted when cleaning the machine or performing maintenance.
- ★ A safety switch is mounted on the machine head. If the machine is tilted with the power on, the safety switch is activated and disables the machine operation. In this disabled condition, the machine will never run even if you depress the foot pedal.

Designed with no oil pan (minute-quantity lubrication type)

Proven thread trimming mechanism.

Computer-controlled, Direct-drive, High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine with an Automatic Thread Trimmer

Thread trimming mechanism notable for its simple structure and extremely reliable performance

- * The knife-sliding method employed by the thread trimmer guarantees that the thread is cut regardless of the needle throw position.
- ★ The knife unit is installed under the bed slide to offer easier maintenance.

The machine is equipped as standard with a needle thread feeding device

- ★ The machine comes with a needle thread feeding device that feeds the needle thread by only the required length at the beginning of sewing.
- ★ The needle thread feeding device prevents stitch skipping and slip-off of the needle thread. It also greatly improves workability by shortening the thread remaining at the needle after it is trimmed.

A push-button-type reverse feed switch is adopted

★ The newly adopted push-button-type reverse feed switch allows the operator to re-position buttons at desired locations. This prevents maloperation when the operator handles the material on the machine.

Troubles are prevented at the beginning of sewing by keeping the bobbin thread tension low

★ The bobbin thread is retained at a low tension after thread trimming. This allows the thread to smoothly come off at the beginning of sewing, thereby preventing thread hitching and stitch gathering.

The machine comes with a completely non-lubricated head to prevent oil stains on sewing products.

Computer-controlled, Direct-drive, High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine (dry-head type)

- ★ The non-lubricated head will never scatter oil, promising cleanly finished sewing products free from oil stains.
- In addition, the machine and table will not be stained with oil during the gauge changing or maintenance on the machine such as cleaning.
- ★ The machine offers a service speed of as high as 4,000rpm for zigzag stitching. With this speed, the machine can be effectively used in various zigzag stitching processes.
- ★ The newly developed special-race plastic hook offers increased durability and upgraded sewing capabilities. It responds beautifully to various types of thread. The hook helps the machine produce consistent high-quality, seams by eliminating changes in the thread tension caused by fluctuating oil levels.

LZ-2290ADS-7-WB

The machine prevents material slippage when using slippery materials.

Computer-controlled, Direct-drive, High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine (with an anti-material-slip capability)

- ➤ Newly developed feed mechanism prevents the material slippage that is likely to occur when sewing slippery or elastic materials used for girdles or bodysuits.
- ★ The machine never fails to produce beautiful, high-quality seams regardless of changes in the sewing material to fabrics such as power net and tricot.
 - (* The effects of the machine may not be obvious on some types of materials.)
- ★ The machine's bottom feed method prevents material slippage. Since the LZ-2290ASU-7 is identical with the standard model in terms of its appearance and gauge parts, workability is entirely unaffected.

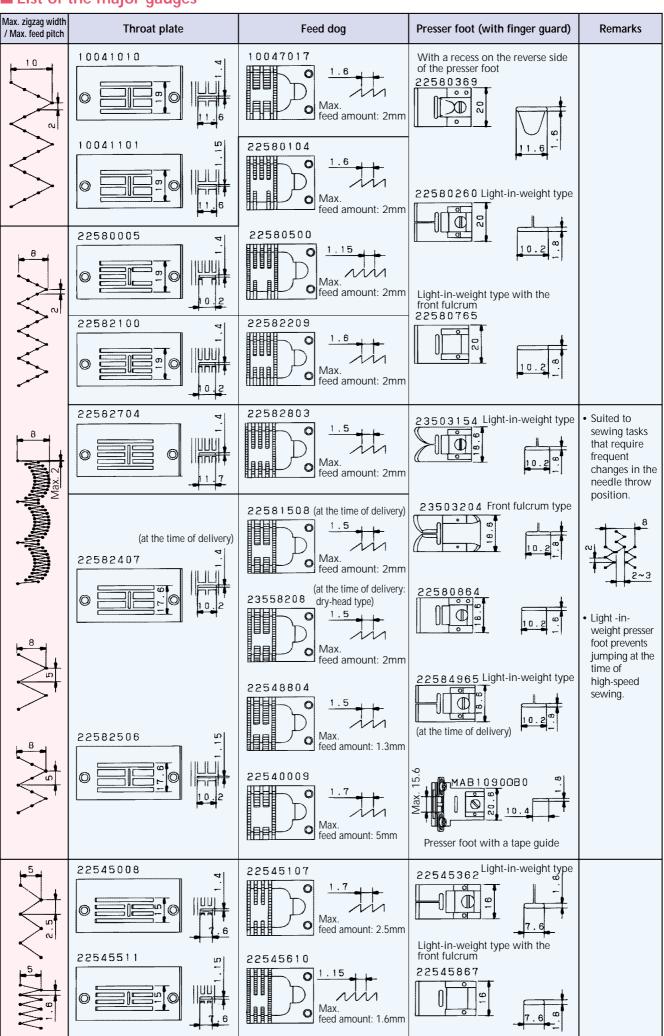

LZ-2290ASU-7-WB

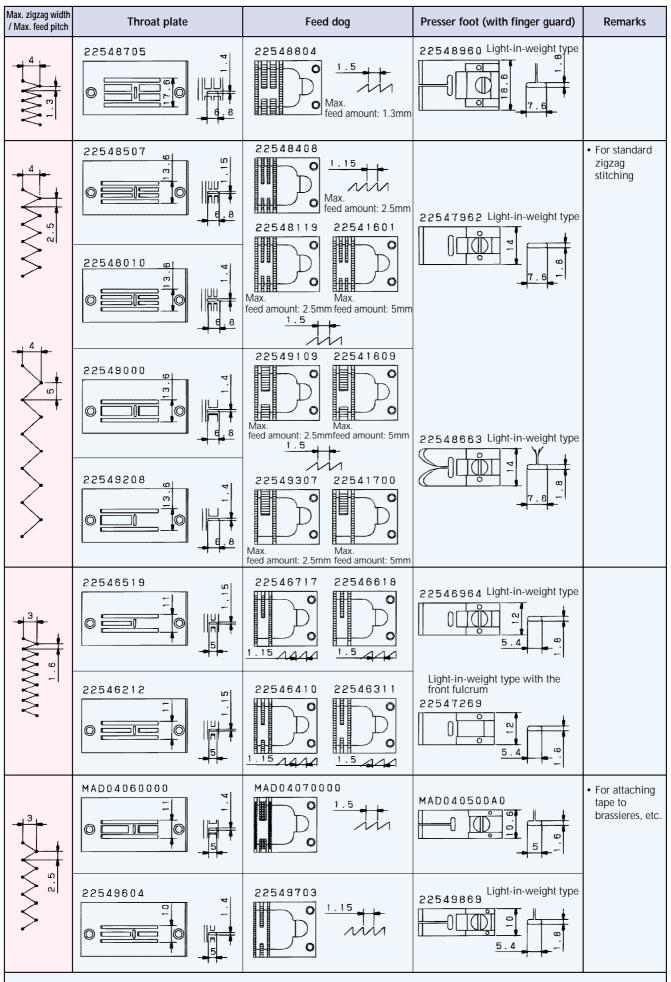

Computer-controlled, Direct-drive, High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine with an Automatic Thread Trimmer

LZ-2290ASS-7-WB

■ List of the major gauges

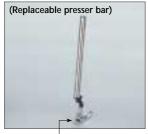

- Max. feed is 5 mm for the LZ-2290ASS(-7). Since the max. feed is 2.5 mm for the LZ-2290ASU(-7), gauges have to be selected with care.
- In addition to the above-listed ones, many different gauges and attachments for zigzag stitching are available. Please contact us for details.

Options

Model	Part No.	Descri	ption	Features			
-	400-10795	Automatic reverse feed kit		When this device is installed, the LZ-2290A (without an automatic thread trimmer) can perform reverse feed operation. (The mirroring switch for scallop stitching is used as the push-button-type reverse feed switch.)			
-	400-03640	Optional switch kit		This handy switch is used to control various functions*. It most effective when operating the machine in a standing position. (*Needle up/down correction, 1-stitch correction, reversitich correction, auto lifter and thread trimmer, etc.)			
AK121	GAK-A21000B0	Auto-lifter (pedal-driven)		-			
_	D1501-583-H00	Presser bar	Presser foot connecting components	The aforementioned parts are used when a lockstitching type presser foot is installed on the machine.
