

Computer-controlled, Eyelet Buttonholing Machine
with a Trimmer for Needle and Looper Thread with Gimp

MEB-3200SS

(for men's and ladies' wear)

MEB-3200RS

(for combined use for lateral and longitudinal buttonholing;
for men's and ladies' wear)

MEB-3200JS

(for jeans)

MEB-3200CS

(for cotton pants and working wear)

MEB-3200TS

(for trouser)

JUKI®

**Direct
Drive
Innovation!**

***The world's first machine that
incorporating an active tension
mechanism (computer-controlled
thread tension mechanism)***

**THE FIRST
IN THE
WORLD!**

AN ACTIVE TENSION MECHANISM (COMPUTER-CONTROLLED THREAD TENSION MECHANISM) THAT ELECTRONICALLY CONTROLS THE NEEDLE AND LOOPER THREAD TENSIONS.

Needle and looper thread tensions can be digitally established on the operation panel according to sewing conditions. Data can be registered on a pattern-by-pattern basis to easily reproduce the same sewing conditions.

- Using conventional machines, it's often quite difficult to reproduce the same sewing conditions. This machine does it with ease. With this capability, the MEB-3200 responds immediately to material changes, significantly reducing the time required for setup changes or adjustments. The machine also ensures the consistent production of high-quality seams.

For needle thread

For looper thread

Thread tensions can be separately established for various sections of a buttonhole such as eyelet sections and parallel sections.

- The machine promises high-quality seams by smoothly responding to changes in stitch formation and allowing the operator to set a separate thread tension for the bartacking sections of buttonholes.

- Thread tensions for the beginning and end of sewing can also be separately established. This helps prevent loose stitches or slip-off or raveling of thread at the beginning of sewing.

Threading work can be more easily.

- Since fewer parts need to be threaded, the machine can be threaded more quickly and easily than conventional buttonholing machines.

EXCELLENT CAPABILITIES TO HELP IMPROVE SEAM QUALITY

Vertically driven cloth cutting knife controlled by a stepping motor.

- The knife is controlled by a stepping motor. This enables easy adjustment of the knife pressure on the operation panel to suit the material to be used, thereby preventing irregular cutting.
- Data on knife pressure can be registered on pattern-by-pattern basis to establish the best-suited knife pressure according to sewing specifications. Adequate knife pressure improves durability of cloth-cutting knife and knife guard.
- Selection between the cut-before knife and cut-after knife can be made on the operation panel.
- The stepping-motor-controlled cloth-cutting knife is free from the troubles likely to affect air-driven knives, including dull cutting and the breakage of parts such as the knife-driving arm. In addition, a large-capacity compressor is no longer required since the machine uses less compressed air.

Knife comes down

Separately driven right and left work clamps.

- The right and left work clamps are separately driven by independent air cylinders. With this mechanism, the work clamps reliably clamp materials of different thicknesses to prevent the materials from flopping.

MEB-3200SS

MEB-3200JS

EASY-TO-OPERATE MULTI-FUNCTIONAL OPERATION PANEL

All pieces of data on sewing specifications can be established/selected on the operation panel.

HIGHER FLEXIBILITY

Thanks to the computer control, many different eyelet shapes and straight buttonhole shapes can be selected or established on the operation panel.

- The machine is provided as standard with 10 different stitching shape patterns. As many as 89 different patterns can be stored in memory and selected.

* Registered in standard patterns (S, R type)
** Registered in standard patterns (J, C, T type)

							
*	**	**	**	*	*	*	*
Buttonhole with a taper bar				Buttonhole with a taper bar			
Buttonhole with a straight bartack				Buttonhole with a straight bartack			
Buttonhole with a round bartack				Buttonhole with a round bartack			
Eyelet buttonhole				Straight buttonhole			

HIGHER PRODUCTIVITY

Reliable overall thread-trimming mechanism.

- The MEB-3200SS/RS for men's and ladies' wear cuts needle threads, looper threads and gimps to leave longer threads on the material. The thread trimmer cuts the thread on the material to lengths that allow the machine to easily retain the thread ends. This facilitates the subsequent bartacking process.
- MEB-3200JS for jeans and MEB-3200CS for cotton pants and working uniform are able to cut the needle thread, looper thread and gimp to leave a shorter thread on the material. In addition, MEB-3200TS for trouser is able to cut the needle thread and looper thread to leave a shorter thread on the material. This eliminates the need for thread picking by hand, thereby increasing both efficiency and productivity.

Longer thread type
<MEB-3200SS/RS>

Shorter thread type
<MEB-3200JS/CS/TS>

Shortened machine time.

- The machine runs at a maximum sewing speed of 2,200rpm to reduce the machine time.

The machine is able to perform cycle sewing.

- For cycle sewing, different 10 programs can be registered. As many as 15 different patterns (consisting of 1 to 15 steps) can be stored in one program.

HIGHER OPERABILITY

Newly developed machine head that efficiently sews longitudinal buttonholes.

- JUKI has newly developed a machine head with a shallow recess. For the efficient sewing of longitudinal buttonholing.
* Use MEB-3200RS for combined use for lateral and longitudinal buttonholing.
- The machine head has a wider space under the work clamps to permit easy placement of a sewing product, thereby improving workability.
- The semi-sunken machine head promises easy placement and smooth handling of sewing products.
- The amount of material opened can be easily adjusted using the screw mounted outside the machine head.

Material opening amount
adjusting screw

MEB-3200JS

Direct-drive motor is adopted.

- The machine has adopted a direct-drive method that connects a compact AC servomotor directly to the hook-driving shaft. The quick startup and increased stopping accuracy obtained as a result guarantees outstanding responsiveness. In addition, the direct-drive motor does not use a V-belt to reduce power consumption.

Improvements of working environment.

- Designed without a clutch mechanism or stop-motion mechanism, the machine produces no stop-motion noise.
- The machine automatically reclaims cloth chips after cloth cutting action to keep the working environment cleaner.

No cloth-chips drop under the bed.

Dust bag

Excellent maintainability.

- The computer controlled design eliminates most of the complicated mechanisms. This dramatically improves maintainability.
- The machine head is supported by a gas-spring that makes it easy to raise for smoother cleaning and threading.

MEB-3200SS □ M, provided with a multi-cutting device

- The multi-cutting device incorporates a separate cloth cutting knife with two sections of blade — one intended for the eyelet sections of buttonholes and one intended for straight sections. When sewing men's wear, the machine can sew eyelet buttonholes on a front body and straight buttonholes on a lapel in a single cycle without changing the knife. Conventionally, two different types of buttonholing machines are required for these processes. By performing two different kinds of buttonholing, the MEB-3200SS □ M halves the time required for the setup procedure, including color thread changing. The end result is increased productivity.
- By dropping the knife two or more times per cycle, the machine can sew buttonholes of various sizes without changing the knife guard (18mm to 38mm for eyelet buttonholes and 10mm to 38mm for straight buttonholes). Since it is also capable of performing cycle sewing, the machine is best suited for small-lot production of ladies' wear subject to frequent design changes.
- The machine is equipped as standard with a needle thread clamp device.

Eyelet shape

Shape

MEB-3200TS □ A for trouser

- The machine trims the needle thread and looper thread remaining on the material and can sew buttonholes on trouser in a single cycle up to the completion of bartacking. This increases both efficiency and productivity by eliminating thread nipping work. * Gimps are not applicable.
- The flat knife cover facilitates the placement of a hip pocket bag on the machine.
- The machine is equipped as standard with a needle thread clamp device.

MEB-3200 □ S □ A, provided with a needle thread clamp device

- The needle thread clamp device eliminates the thread securing procedure by tucking the needle thread in the finished seams.
- The needle thread clamp device retains the needle thread to ensure neat seam formation from the very first stitch.
* The needle thread clamp device can be retrofitted to the machine. Optional part: Part No.: 320-24465

LIST OF THE REPLACEMENT GAUGES

: Provided as standard No symbol : Optional
: Accessory - : Installation is invalid.

Throat plate

Taper bar length	0mm, 3 ~ 15mm				
Work clamp height	13mm (max. 16mm)				
Method for changing stitch shape	By selecting a program				
Buttonhole cutting method	By cut-before knife or cut-after or without buttonhole cutting				
Feed system	Intermittent feed by a stepping motor				
Cloth cutting knife drive system	Vertically driven by stepping motor				
Needle (at the time of delivery)	DO × 558 (Nm100) Nm90 ~ Nm110		DO × 558 (Nm120) Nm110 ~ Nm120	DO × 558 (Nm110) Nm110 ~ Nm120	DO × 558 (Nm100) Nm100 ~ Nm110
Lubrication	Automatic (looper and spreader: by an oiler)				
Lubricating oil	JUKI New Defrix Oil No.2 (equivalent to ISO VG32)				
Compressed air and air consumption	0.5MPa (5kgf/cm ²), 6Nℓ /min (8cycle/min)				
Power requirement and power consumption	Single-/3-phase, 550VA				
Dimensions	1,060mm (W) × 790mm (D) × 1,230mm (H)				
Total weight	185kg				

* By selecting the left looper and left spreader, the range of stitch bite can be changed to 2.6 ~ 4.0mm from 2.0 ~ 3.2mm (TS model is excluded)

WHEN YOU PLACE ORDERS (COMPLETE)

Please note when placing orders, that the model name should be written as follows:

Application	Code
For men's and ladies' wear	S
For combined use for lateral and longitudinal buttonholing: for men's and ladies' wear	R
For jeans	J
For cotton pants and working wear	C
For trouser *	T

* When the sewing specification category T (trouser) is selected, A is the only option category available for selection (needle thread clamp device).

Power supply	Code
Single-phase	220 ~ 240V K
3-phase	220 ~ 240V D
Single- / 3-phase	220 ~ 415V L
	220 ~ 415V (for CE) M

MEB3200

Table stand	Code
Standard	S

Option	Code
Not provided	Z
Needle thread clamp device	A
Multi-cutting device	M
Needle thread clamp device *	

* When option category M (multi-cutting device, needle thread clamp device) is selected, S is the only sewing specification category available for selection (men's and ladies' wear).

* Specifications and appearance are subject to change without prior notice for improvement.
* Read the instruction manual before putting the machine into service to ensure safety.
* This catalog is printed on recycle paper.

OPTIONS

● Marking lamp, asm. (Part No.: 320-70054)

When placing the material on the machine, accurate lateral positioning is guaranteed. (for S, J, C type)

● Pedal switch, asm. (Part No.: M8590-513-0AA)

The work clamps can be lifted/lowered and the machine can be started using the pedal switch.

* To use the pedal switch, asm., the pedal switch cable, asm. (M9014-620-0AA) will be also required.
